

Final Opportunity for **Electricity Resilience** for your site at **NO COST**

HOW THE ELECTRICITY AND DEMAND SYSTEM WORKS:

As Ireland’s electricity demand increases and more renewables are added to the grid our electricity system is under increased stress. The result is that large companies run the risk of loss of production/service due to blackouts. To address this, the electricity market is incentivizing the installation of HVO generators to ensure a stable power supply.

CoolPlanet OFFER:

- Full turnkey solution at no capital cost
- Protection from possible grid power outages (site resilience)
- New synchronised HVO generator installed on your site
- New electrical infrastructure installed on your site
- Annual equipment maintenance included
- Free electricity when the generator is running for grid support
- Fixed annual revenue stream*
- 10-year contract ensuring long-term benefits.

*Dependent on site survey

This is the last month that CoolPlanet is able to provide this offer due to the influx of renewable investment and the uptake in 10-year capacity contracts.

YOU ARE ELIGIBLE IF:

- You have an average energy usage of 3.5million kWh/yr
- Reliable electricity supply is critical to your production
- You have space for an on-site electricity generator

Secure Your Power Supply and Earn Revenue by Contacting Us Today.

About CoolPlanet

CoolPlanet is a global leader in industrial-scale decarbonisation. By combining technology and world-leading engineering expertise, CoolPlanet helps large organisations reach Net Zero faster, at scale.
